

## **CARNITENE**

*Carnitene* is a unique molecule that has both amino acid and vitamin properties. *Carnitene* improves the efficacy and metabolism of heart from myocardial ischemia. Moreover, in acute myocardial infarction, *Carnitene* can reduce arrhythmias and improve shock.

From various clinical studies, *Carnitene*:

- Enhance the quality of dialysis
- Reduce dialysis compositions
- Improve cardiac efficiency
- Improve anemia, elevate the sensitivity to EPO
- Enhance the nutrition parameter

Manufactured in Italy
