

Donation of ERT-PCR Technology for New Coronavirus Detection Press Conference

On March 3, 2020, Hong Kong Biotechnology Organization held a press conference at Hong Kong Science Park, announcing the donation of ERT-PCR Technology for New Coronavirus Detection. As one of the supporting organizations, Lee's Pharmaceutical Holdings Ltd. ("Lee's Pharm" or "the Group") participated by donating protective materials.

Dr. Li Xiaoyi, CEO of the Group, pointed out that Recombinant Human Interferon a-2b Gel Yallaferon® has been selected as one of the critical materials for this epidemic prevention and control by the Department of Economic and Information Technology of Anhui Province. Therefore, production in Mainland was raised during Chinese New Year and donated to Mainland hospitals. A hypertension drug Aliskiren Tablets Rasilez® was undergoing clinical trials on SARS-CoV-2 patients with hypertension in two Wuhan Hospitals. Furthermore, the Group is planning to make use of our Hong Kong clean room in mask production. Meanwhile, protective gears including 10 thousand masks and self-produced anti-bacterial hand gel will be distributed to the grassroots, elderly and students. Any charitable donation invitations are welcome in hope to cope with the SARS-CoV-2 outbreak together.
